In December of 1962, a team of Soviet scientists embarked on a secret research mission at a remote station in Siberia. Isolated by the terrain, all communication cut off by a massive blizzard, they quickly realize that the station's true purpose is of a far darker nature than they were led to believe. As madness descends upon the station and its inhabitants, it is left to geology professor Josef Goriyavich to uncover the mystery of Kerchikov Deep-Well Station before it's too late. "The Kerchikov Terror" is a tale of one man's struggle to maintain his sanity in the face of a cosmic horror older than the stars themselves.
